

Street Paving Priorities

NOTES (partial) Streets are primarily selected based upon Surface Score of Poor Segments of the total street and estimated traffic volume on the street (several variations of these criteria were incorporated, two of which are shown in the list).

Poor segments of streets are priority for paving. Better segments may, or may not, be paved depending on a number of practical considerations.

Practical considerations for final paving include (but are not limited to):

visual inspection to verify road condition, determination of necessary drainage corrections, utility and/or city street openings or intersection improvements expected in the near future;

base condition of the road, availability of funds, availability of contractor(s), coordination of work in a general area, other segments near priority streets that are in poor surface condition.

The objective is to pave all, or nearly all, of the priority streets (subject to anticipated utility or city work) within the next 2 years.

Some roads have already been paved. Political districts have not been considered in the priority list. The poor segments for priority may or may not be in the district indicated below.

This list is a continuing work-in-progress, and subject to change as utility plans and other considerations may evolve. V19.1
